

An Internship Report

Of

NIVRANTA GROUP PVT. LTD.

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech (Computer Science and Engineering)

By

Roll Number of Student: 1003000739

Name of Student: Jismita Deka

Batch: 2025-2029

CANDIDATE'S DECLARATION

I, Jismita Deka do hereby declare that the internship report titled
“NIVRANTA GROUP PVT. LTD.” has been completed by me to fulfil the requirement
for the award of the degree of Bachelor of Technology in Computer
Science and Engineering.

All the references have been quoted and I have not taken as such any material from
any
other source. I affirm that this report is my own and has not been submitted to any
other
institute for any degree/diploma requirement, and further I shall be solely responsible
for any kind of copyright violation in this regard.

Student Name: Jismita Deka

Roll No.: 25scs1003000739

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me
throughout the Internship Program. I am thankful for their aspiring guidance,
invaluably constructive criticism and friendly advice during this work. I am sincerely
grateful to them for sharing their truthful and illuminating views on a number of
issues
related to this work.

I would like to thank the Nivranta Group PVT. LTD. for providing me the
opportunity and the structured platform to learn and gain hands-on exposure in the
domain of Computer Networking. I am also thankful to my institute, IILM
University,
Greater Noida, and the faculty of the School of Computer Science and Engineering
for
their continuous support and encouragement.

I express my gratitude to my parents for their blessings.

Place: Guwahati, Assam

NIVRANTA GROUP PVT. LTD.
Director
Authorized Signatory
Amarjyoti Deka
Designation: Director

4. PROJECT DESCRIPTION

4.1 Introduction

This report presents a detailed account of the 8-week Internship undertaken, in the domain of Computer Networking, supported by Nivanta Group PVT. LTD.. The internship was carried out from June 2026 to August 2026 as part of the requirement of the Bachelor of Technology (Computer Science and Engineering) programme at IILM University, Greater Noida. The primary aim of this internship was to build a strong practical foundation in Computer networking using **CP/IP**, **DNS**, **DHCP**, and **VLANs** and to apply it to real-world problems. The internship followed a structured, week-wise curriculum combining conceptual learning with hands-on assignments, quizzes, learning-pathway badges, and a final credential validation. On successful completion of all the requirements, including the Internship Grade Point Assessment, a

Virtual Internship Certificate with an “Outstanding” grade was awarded by Nivranta Group PVT. LTD.

4.2 Organization Profile

Nivranta Group PVT. LTD.(**CIN:** U74999AS2023PTC028765) Is an certified organization working under the theme “Building Today | Creating Tomorrow”. It is a a diversified/general business services company with its’s Registered Office in Guwahati, Assam. This internship was possible due to guidance and mentorship of Director/Authorized Signatory - Amarjyoti Deka.

4.3 Problem Statement

design and develop a web-based platform for Nivranta Group Pvt. Ltd.

Computer networking problem solving is the systematic process of **identifying** , **replicating** , **isolating** , and **fixing** connectivity, performance, or communication failures within a network. This methodology distinguishes between issues within your control (local hardware, configuration) and those outside your control (ISP, external routing)

4.4 Project Objectives

1. Design and develop a responsive corporate website:

Create a professional web presence for Nivranta Group Pvt. Ltd. that reflects its brand identity, business verticals, and credibility as a registered company.

2. Build a certificate verification system:

Develop a searchable database-backed module where anyone can enter a certificate number (e.g., NGP/INT/2026/004) and instantly verify its authenticity – name, program, duration, and issue status.

3. Eliminate manual/paper-based credential verification:

Replace the current process (where verifying a certificate would require manually checking records or emails) with an automated, self-service lookup tool.

4. Create an admin panel for record management:

Give company staff a simple, login-protected interface to add, update, or manage certificate records without needing developer help each time.

5. Implement a lead-capture/contact system:

Add a functional inquiry/contact form so prospective clients, partners, or interns can reach the company directly through the website.

6. Ensure data integrity and security:

Protect certificate records from unauthorized edits or tampering, using basic authentication and input validation, so the "verified" result can genuinely be trusted.

7. Optimize for accessibility and performance

Make the site mobile-responsive, fast-loading, and easy to navigate across devices, since most inquiries and verifications will likely happen on mobile.

8. Document the development process

Produce supporting documentation (requirement analysis, wireframes, user guide for admin panel) to hand over to the company for future maintenance/scaling.

9. Demonstrate practical full-stack skills

Apply front-end, back-end, and database concepts in a real-world use case – going beyond a static portfolio site to solving an actual business problem (credential fraud + lack of digital presence).

4.5 Scope of the Project

1. Corporate Website Development

- Home, About Us, Services/Business Verticals, Careers, Contact pages
- Responsive design (desktop, tablet, mobile)

- Basic SEO setup (meta tags, sitemap)

2. Certificate Verification Module

- Database to store certificate records (Name, Certificate No., Program, Duration, Issue Date, Status)
- Public search interface – enter certificate number → view verification result

Admin interface to add/edit/delete certificate entries

3. Admin Panel

- Secure login for authorized staff (e.g., Director/HR)
- Dashboard to manage certificate records and view contact form submissions

4. Contact/Inquiry Form

- Form fields: Name, Email, Phone, Message
- Backend validation and email notification to company inbox

5. Careers/Internship Page

- Static listing of internship programs/domains offered
- Simple application form (name, resume upload, domain of interest)

6. Documentation

Requirement analysis, wireframes, source code, deployment guide, admin user manual

4.6 Technologies and Tools Used

Database: MySQL

Tools: Git, VS Code, Figma, Postman

Hosting: Netlify/Vercel + Render/shared hostin

4.8 Methodology

Given the **1-month timeframe**, this project would typically follow an **Agile-inspired, phase-wise approach** (a scaled-down SDLC), broken into weekly sprints rather than a rigid Waterfall model – since

requirements and features often get refined as you build. **Phase 1:**

Requirement Analysis & Planning (Week 1)

Understand company's needs through discussion with mentor/Director

- Identify core problem (no digital presence + certificate authenticity)
- Define project scope, objectives, and feature list
- Choose technology stack
- Create a rough project timeline/task breakdown

Phase 2: Design (Week 1-2)

- Create wireframes/mockups for each page (Home, About, Verify Certificate, Contact) using Figma
- Design database schema (tables for certificates, admin users, inquiries)
- Plan the UI/UX flow – how a user searches for certificate verification, how admin adds records

Phase 3: Development (Week 2-3)

Broken into sub-stages:

- **Frontend development** – build static pages, responsive layout, forms
- **Backend development** – set up server, create APIs (certificate search, form submission, admin login)
- **Database integration** – connect backend to MySQL/MongoDB, populate sample certificate records
- **Admin panel** – build login-protected dashboard for managing records

Phase 4: Testing (Week 3-4)

- **Unit testing** – individual components (form validation, search function)
- **Integration testing** – frontend-backend-database communication
- **User acceptance testing (UAT)** – mentor/staff test the certificate verification flow with real sample data

Cross-browser and mobile responsiveness checks

- Bug fixing based on feedback

Phase 5: Deployment (Week 4)

- Deploy frontend and backend to hosting platform
- Final round of testing on the live/staging environment
- Handover admin credentials and a basic user guide to company staff

Phase 6: Documentation & Presentation (Week 4)

- Prepare project report (objectives, scope, methodology, screenshots, outcomes)
- Create a short demo/presentation for the company
- Submit source code and deployment links

4.9 Expected Outcomes

1. Functional Deliverables

- A fully functional, responsive **corporate website** for Nivranta Group Pvt. Ltd., live and accessible online
- A working **certificate verification portal** where anyone can enter a certificate number and instantly confirm authenticity
- A secure **admin panel** for staff to manage certificate records and view inquiries

- A functional **contact/inquiry form** capturing leads for the company

2. Business Impact for the Company

- **Improved credibility** – the company now has a professional digital presence, making it easier for clients, partners, and prospective interns to verify its legitimacy
- **Reduced certificate fraud risk** – certificates can no longer be silently forged or misrepresented, since anyone can cross-check them against the database

Time savings – staff no longer need to manually respond to "is this certificate real?" queries; the system handles verification instantly

- **Scalable record-keeping** – as more interns join, their certificate data can be added to a growing, searchable database instead of scattered files

5. Future Scope (Recommendations, not built)

- QR-code-based instant verification (scan certificate → autoredirect to verification page)
- Digital signature integration for tamper-proof certificates
- Automated email delivery of certificates upon internship completion
- Analytics dashboard for tracking inquiry/application trends
